

# Japan solar energy society

renewable energy supply in Japan by 76% from 2012 to 2019.

For over 60 years the members of The International Solar Energy Society (ISES) have undertaken the product research that has helped the renewable energy industry to grow. ISES, through its knowledge sharing and community building programs, helps its global membership provide the technical answers to accelerate the transformation to 100% ...

Japan Solar Energy Society. Type. NGO. Country. Japan. #energy; Last Update: October 22, 2022. About us. We promote the use of renewable energy such as wind power and biomass, including solar energy, as well as the promotion and dissemination of science and technology from the basics to applications related to building a sustainable society ...

At the same time, in order to expand the use of renewables, Japan must consider how to make them cheaper for society. In Japan, coal-fired power is still competitive with other forms of energy, including renewables, because of Japan's rigid energy markets. This is an unusual situation compared with other developed and developing countries ...

In October 2020, the new Prime Minister of Japan declared that by 2050 Japan will aim to reduce greenhouse gas emissions to net-zero and to realise a carbon-neutral, decarbonised society. This declaration is a defining moment for Japan's future energy and climate policies, and the government is developing additional policies and measures to ...

ISES has been serving the needs of the renewable energy community since its founding in 1954. A UN-accredited NGO present in more than 50 countries, the Society supports its members in the advancement of renewable energy technology, implementation and education all over the world.

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy. In total, solar energy in ...

Based on the database (ver-1, ver-2) of a spectral irradiance for all weather conditions, which was released by the New Energy and Industrial Technology Development Organization (NEDO), the solar spectral irradiance from the relation among spectral irradiance, global irradiance, sunshine ratio, solar altitude and precipitation was investigated.

The share of variable renewable energy (VRE), such as solar and wind power, also reached 26.6% in Europe as a whole, more than twice the share in Japan (about 12%). Figure 5 shows a breakdown of the percentage of electricity generated annually from renewables in 2023 for major European countries, the United States, China, and Japan.
