

Jinnuo solar bracket assembly diagram

Where should Jinko Solar PV modules be installed?

In most applications, Jinko solar PV modules should be installed in a location where they can receive maximum sunlight throughout the year. In the Northern Hemisphere, the module should typically face south, and in the Southern Hemisphere, the modules should typically face north.

What should I know before installing Jinko Solar?

as may be present. Do not remove any part installed by Jinko Solar or disassemble the module. All instructions should be read and understood before attempting to install, wire, operate and maintain the module. Don't lift up PV modules using the attached cables or the junction box. Do not touch live terminals.

Can Jinko Solar PV modules be installed near the seashore?

Operation in permanent shading conditions is not recommended. Do not install the PV module near open flame or flammable materials. Jinko Solar PV modules have passed the IEC 61701 salt spray corrosion test. PV modules can be installed at a distance of 50m away from the seashore.

Can Jinko Solar PV modules be installed in permanent shading conditions?

Operation in permanent shading conditions is not recommended. Do not install the PV module near open flame or flammable materials. Jinko Solar PV modules have passed the IEC 61701 salt spray corrosion test (test method 6). PV modules can be installed at a distance of 50m away from the seashore.

Can Jinko Solar modules be mated together?

Connectors and bypass diodes from different manufacturers should not be mated together. If such replacement is needed, please contact Jinko Solar. 4. Maintenance and Care It is required to perform regular inspection and maintenance of the modules, especially during the warranty period.

What is the length of a Jinko module?

below in Figure 11. For Jinko standard full module L is 900/1200mm, the half-cut module L is 145/290mm, and the SWAN bifacial module L is 150/250mm. For customized module, L can be based on your condition. Please take the cable length into consideration before designing.

Solar iBoost's Sender and Clamp are installed at the household electricity meter. The Clamp detects when excess energy is available, and the Sender wirelessly sends a signal to the Solar iBoost+ to activate water heating. The Solar ...
