A long term exposure to manganese causes Manganism or manganese poisoning. The symptoms of this poisoning include reduced response, irritability, and mood swings. This condition is always misdiagnosed to that as Parkinson's disease because some of the symptoms are the same in both conditions. The mainstay treatment for manganese poisoning is chelation with EDTA (Ethylenediaminetetraacetic acid) and L-Dopa also known as levodopa. Levodopa helps in reducing the symptoms however response to the symptoms goes down after 2-3 years.
