

What is the nature of microgrid?

The nature of microgrid is random and intermittent compared to regular grid. Different microgrid structures with their comparative analyses are illustrated here. Different control schemes, basic control schemes like the centralized, decentralized, and distributed control, and multilevel control schemes like the hierarchical control are discussed.

What is the function of microgrid control?

The function of microgrid control is of three sections: (a) the upstream network interface, (b) microgrid control, and (c) protection, local control. Microgrid control is assessed in many studies, and it can be grouped based on the tree diagram, Figure 8.

What are the components of microgrid control?

The microgrid control consists of: (a) micro source and load controllers, (b) microgrid system central controller, and (c) distribution management system. The function of microgrid control is of three sections: (a) the upstream network interface, (b) microgrid control, and (c) protection, local control.

What control techniques are used in microgrids?

Xiao et al. presents a survey of the various control techniques developed for microgrids. Several control strategies have been proposed for microgrids in [93 - 96]. Robust H<sub>∞</sub> control is presented in [97, 98] for the control of two distributed generation units.

What are centralized and decentralized control functions in microgrids?

It presents the hierarchical control levels distinguished in Microgrids operation and discusses the principles and main functions of centralized and decentralized control, including forecasting and state estimation. Next, centralized control functions are analyzed and illustrated by a practical numerical example.

What are the studies run on microgrid?

The studies run on microgrid are classified in the two topics of feasibility and economic studies and control and optimization. The applications and types of microgrid are introduced first, and next, the objective of microgrid control is explained. Microgrid control is of the coordinated control and local control categories.
