What is a microgrid training crash course?

The microgrid training crash course is a three-day intensive crash course for individuals who need to brush up in the Microgrid area, Microgrid control, and energy management techniques in Microgrids.

What is Microgrid Certification Training?

Microgrid Certification Training is a 3-day course designed for all engineers who want to learn, design, or operate microgrids. It is also suitable for power traders to understand modern microgrid technologies and independent system operator personnel. The training covers understanding energy management systems (EMS) in microgrids, including centralized or decentralized microgrids.

What types of studies are conducted on microgrids?

The studies on microgrids are classified into two main topics: feasibility and economic studies, and control and optimization. The applications and types of microgrids are introduced first, and next, the objective of microgrid control is explained. Microgrid control falls under the categories of coordinated control and local control.

What is a microgrid?

A microgrid is a group of interconnected loads and distributed energy resources that acts as a single controllable entity with respect to the grid. This learning path will provide an understanding about microgrid technologies.

What is a microgrid learning path?

This learning path will cover the fundamental elements of microgrid definitions, design, and analysis. First Chapter provides a comprehensive overview of microgrid concepts, functional features, and benefits, followed by examples of applications around the world as well as possible future directions.
