By redoubling efforts to adopt clean energy technologies, the Northeast can modernize its energy systems, give consumers better options to control energy costs, advance economic growth, and dramatically reduce climate pollution. Emissions Reductions. 18 % Below 1990 Levels.

The energy system optimization model is based on linear optimization of perfect foresight conditions under applied constraints. A multi-node approach enables us to describe any desired configuration of sub-regions and power transmission interconnections, i.e., not all the sub-regions have to be interconnected, but a grid configuration can be defined in scenario assumptions or ...

**RENEWABLE ENERGY COMMITTEE.** The Renewable Energy Committee is dedicated to educating members on renewable energy matters, connecting individuals working or interested in the industry, increasing the awareness of the benefits of renewable/clean energy, and to facilitating the growth of the industry in the Northeast.
