

# On-site generation for data centers

On Monday, Meta's billionaire CEO Mark Zuckerberg said that his company is on track to be the first with a "supercluster" of data centers that houses more than a gigawatt of capacity, citing ...

The U.S. Department of Energy has selected the Savannah River Site (SRS) in South Carolina as one of four federal locations to host new artificial intelligence-ready data centers and ...

Detailed info and reviews on 100 top Data Center companies and startups in United States in 2025. Get the latest updates on their products, jobs, funding, investors, founders and ...

Data centers are adopting onsite power as a primary energy source, according to the 2025 Data Center Power Report from Bloom Energy. Data centers are likely to continue to struggle with ...

As on-site generation facilities develop, the way data centers hook up to their power supplies could change further. A move to higher-voltage electricity supply could produce efficiencies ...

GPC's solution: on-site, behind-the-meter generation using clean-burning, flexible natural gas. This approach offers three key benefits: Speed to Power - On-site generation bypasses grid ...

In response, data centers are rapidly pivoting to onsite power generation. Bloom's survey data shows that 38% of data centers expect to incorporate onsite generation by 2030. Even more ...

Not all data centers are content just pulling power from the grid. Some are taking things into their own hands, quite literally, by generating energy right on-site. This approach, known as...

Siemens Energy data center solutions are modular and scalable to meet customer needs. Whether a data center needs connection to the grid, on-site power generation, solutions for grid stability, or utility and IPP operations, ...

Talen Energy has signed agreements to acquire two natural gas combined-cycle (NGCC) plants in the PJM power market in the interest of catering to large-load off-takers, like data centers. ...

Anticipated growth in artificial intelligence (AI) development requires the buildout of additional power capacity at an exceptional scale and speed. Data center operators often prefer that this ...

Data centers are now turning to on-site power generation paired with carbon capture to meet their urgent power needs while achieving decarbonization goals. Intermittent renewables struggle to ...

## On-site generation for data centers

Do data centers have a history of independent power generation? Data centers, and other vital facilities, commonly have some amount of on-site electricity generation as a back-up for grid ...

Together with our Stargate I site in Abilene, Texas, this additional partnership with Oracle will bring us to over 5 gigawatts of Stargate AI data center capacity under development, which will run over 2 million chips. This significantly advances ...

By leveraging its advanced gas turbine technology, the company is addressing the urgent need for scalable, on-site power generation solutions for hyperscale data centers--a demand driven ...

The sites -- the Idaho National Laboratory, Oak Ridge Reservation, Paducah Gaseous Diffusion Plant and Savannah River Site -- are "well-situated for large-scale data centers, new power ...

Distributed Power Generation Market Size & Share Analysis - Growth Trends & Forecasts (2025 - 2030)  
The Distributed Power Generation Market Report is Segmented by Technology (Solar, Wind Turbines, Gas ...

Relativity Networks Secures \$6M Seed Funding to Power the Next-Generation Fiber-Optic Cable for Data Centers, Raising Total to \$10.6M Investors" backing bolsters Relativity Networks" ...
