

Optimal tilt angle table for photovoltaic panels

Are photovoltaic panels optimal tilt angles?

This study provides estimates of photovoltaic (PV) panel optimal tilt angles for all countries worldwide. It then estimates the incident solar radiation normal to either tracked or optimally tilted panels relative to horizontal panels globally. Optimal tilts are derived from the National Renewable Energy Laboratory's PVWatts program.

What angle should a solar panel be tilted?

The tilt angle of your solar panels should ideally match the angle of the sun's rays for maximum sunlight absorption. This angle varies depending on your geographic location, the time of year, and the specific daily trajectory of the sun across the sky.

How do I find the best angle for my solar panels?

Simply enter your address and it will provide the optimal angles for each season, as well as a year-round average angle for your specific location. An example of the calculator results. Discover the best angle for your solar panels with our Solar Panel Tilt Angle Calculator. Maximize energy efficiency and save money!

What is the best angle for solar panels in the UK?

The best all-year-round angle for PV (photovoltaic) solar panels in the UK is 35-40 degrees. The best angle for each region within the UK will vary slightly within this. For seasonal changes, the best angle for summertime is 20 degrees and 50 degrees in winter. See below for the optimum angle for each UK region.

Do solar panels need a 49-degree tilt?

Your solar panels need a 49-degree tilt. If you're still learning about solar, refer to our complete advice section for more help and advice, which includes guides on the best solar panels, costs of installing solar and if solar is worth it.

Why do solar panels need a higher tilt angle?

When the sun is lower in the sky, solar panels need a greater tilt angle to receive direct sunlight. When the sun is higher, panels require less tilt. The goal is to catch as much direct sunlight as possible throughout the day and across seasons. So when the sun hangs lower in winter, you'd increase the panel angle.
