

International financing to developing countries in support of clean energy research and development and renewable energy production. This data is expressed in US dollars. It is adjusted for inflation but does not account for differences in the cost of living between countries.

The lack of access to these technologies causes some of the worst global problems of our time. When people lack access to modern energy sources for cooking and heating, they rely on solid fuel sources - mostly firewood, but also dung and crop waste.

So at Our World in Data we try to maintain consistency by converting all energy data to watt-hours. We do this to compare energy data across different metrics and sources. We will continue to update our data and charts with the latest global and country figures - typically on an annual basis. ... Renewable energy here is the sum of hydropower ...

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. ... Our World In Data is a project of the ...

As the world attempts to transition its energy systems away from fossil fuels towards low-carbon energy sources, we have a range of energy options: renewable energy technologies such as hydropower, wind, and solar, as well as nuclear power. Nuclear energy and renewable technologies typically emit very little CO₂ per unit of energy production and are also much ...

Definition of the SDG indicator: Indicator 7.2.1 is "renewable energy share in the total final energy consumption" in the UN SDG framework. This is measured as consumption of renewable energy - which includes solar, wind, geothermal, hydropower, bioenergy, and marine sources - as a share of final energy consumption.

Renewable electricity production is growing quickly, mostly thanks to the deployment of solar and wind. Ember has just published its latest Global Electricity Review, which includes final updates on electricity generation worldwide in 2023. We have updated our Energy Data Explorer with all of this data.. As the chart shows, renewables produced just over 30% of ...

IRENA publishes detailed statistics on renewable energy capacity, power generation and renewable energy balances. ... This is the citation of the original data obtained from the source, prior to any processing or adaptation by Our World in Data. To cite data downloaded from this page, please use the suggested citation given in Reuse This Work ...

Primary energy is based on the substitution method and measured in terawatt-hours. Renewables include hydropower, solar, wind, geothermal, wave and tidal, and bioenergy, but not traditional biofuels. ... prior to any processing or adaptation by Our World in Data. To cite data downloaded from this page, please use the suggested citation given in ...

Renewable energy generation Line chart; Solar energy generation vs. capacity; Chart 1 of 4. Sources and processing. ... This is the citation of the original data obtained from the source, prior to any processing or adaptation by Our World in ...

The chart below shows the percentage of global electricity production that comes from nuclear or renewable energy, such as solar, wind, hydropower, wind and tidal, and some biomass. ... All visualizations, data, and code produced by Our ...

1 day ago; South Africa is certainly not a world leader when it comes to renewables, with sources such as wind, solar and hydropower comprising just 3.94% of its primary power in 2023 - ...

The chart below shows the percentage of global electricity production that comes from nuclear or renewable energy, such as solar, wind, hydropower, wind and tidal, and some biomass. ... All visualizations, data, and code produced by Our World in Data are completely open access under the Creative Commons BY license. You have the permission to ...

Production-based vs. consumption-based energy use; Renewable and nuclear energy: direct vs. substituted energy; Renewable electricity generation Stacked area chart; Renewable energy consumption; Renewable energy generation Line chart; Renewable energy investment; Share of cars currently in use that are electric; Share of direct primary energy ...

Ember (2024); Energy Institute - Statistical Review of World Energy (2024); Population based on various sources (2023) - with major processing by Our World in Data. "Electricity generation from renewables per person - Ember and Energy Institute" [dataset].

The availability of energy has transformed the course of humanity over the last few centuries. Not only have new sources of energy been unlocked -- first fossil fuels, followed by diversification to nuclear, hydropower, and now other renewable technologies -- but also in the quantity we can produce and consume.

Modern renewable energy generation by source; Chart 1 of 2. Sources and processing. This data is based on the following sources. Ember - Yearly Electricity Data. ... This is the citation of the original data obtained from the source, prior to any processing or adaptation by Our World in Data.

Primary energy consumption from wind; Renewable and nuclear energy: direct vs. substituted energy; Renewable electricity-generating capacity per person; Renewable energy consumption; Renewable energy

Ourworldindata renewable energy

generation Line chart; ...

Methodology and notes Global average death rates from fossil fuels are likely to be even higher than reported in the chart above. The death rates from coal, oil, and gas used in these comparisons are sourced from the paper of Anil Markandya and Paul Wilkinson (2007) in the medical journal, *The Lancet*. To date, these are the best peer-reviewed references I could ...

Primary energy is based on the substitution method and measured in terawatt-hours. Renewables include hydropower, solar, wind, geothermal, wave and tidal, and bioenergy, but not traditional biofuels. ... prior to any processing ...

Primary energy consumption from wind; Renewable and nuclear energy: direct vs. substituted energy; Renewable electricity generation Stacked area chart; Renewable electricity-generating capacity per person; Renewable energy ...

The installed capacity of power plants that generate electricity from renewable energy sources. This includes hydropower, marine (ocean, tidal and wave), wind, solar (photovoltaic and thermal energy), bioenergy, and geothermal energy. ... prior to any processing or adaptation by Our World in Data. To cite data downloaded from this page, ...
