

The wind vibration response of the photovoltaic array is reduced by about 25 %, and the wind suppression measures can effectively improve the wind vibration resistance of the photovoltaic ...

Flexible photovoltaic brackets are prone to be significant wind induced vibrations, which can lead to various structural safety and usability issues. ... proposing corresponding vibration ...

Tremendous reduction in vibration response experienced by a bracket of aerospace vehicle is achieved by optimum tuning of stiffness and mass. The outcome of this work established an ...

Photovoltaic module arrays are arranged in space, increasing module density per unit area by precisely controlling inter-row spacing. ... the flexible bracket significantly ...

Previous studies focus on the wind load characteristics of roof- or ground-mounted PV structures. Cao et al. [1], Warsido et al. [2], Naeiji et al. [3], Stathopoulos et al. [4], ...

They investigated the reduction factor for a beam-column support PV array with a tilt angle of 12° ; through CFD simulations but only provided the results for wind directions of 0° ; and 180° ;, under which the ...

Abstract With the improvement of national living standard, electricity consumption has become an important part of national economic development. Under the influence of "carbon neutral" ...

With the shortage and the pollution caused by traditional energy sources, the clean energy has been vigorously used in the world in recent years. Solar energy is abundant in China, which is utilized through installing the PV ...

Photovoltaic bracket vibration reduction
