The active power control of photovoltaic (PV) inverters without energy storage can flatten the fluctuating power and support the voltage amplitude and frequency of the grid.

Therefore, strategies for voltage control of PV-connected unbalanced distribution system are need to be analysed for improvement. ... with a fault resistance of 1Ω is created at 1 s for the period 150 ms. Fig. 9a shows ...

The cascaded control method with an outer voltage loop and an inner current loop has been traditionally employed for the voltage and power control of photovoltaic (PV) inverters. This ...

Assuming the initial DC-link voltage in a grid-connected inverter system is 400 V, $R = 0.01 \Omega$, $C = 0.1F$, the first-time step $i=1$, a simulation time step Δt of 0.1 seconds, and ...

An improved topology of a current source grid-connected photovoltaic inverter is adopted, where a chopper circuit is added in the DC link, and a novel control strategy is further proposed to ...

This paper provides a systematic classification and detailed introduction of various intelligent optimization methods in a PV inverter system based on the traditional structure and typical control. The future trends and ...

The mode detection and switch strategies are proposed to solve the power shortage problem, making the PV inverter maintain the voltage-control method even in the power shortage state. ...

In grid-connected systems, power inverters transform the DC voltage PV output into AC waveforms for the electrical power grid. ... A Model Predictive Power Control Method for PV and Energy Storage Systems with ...

After the system reaches a steady state, the simulated grid-connected PV system delivers output power of around 4 kW as shown in Fig. 5, and the system can operate efficiently and stably ...

In this study, a reactive power control method is proposed benefitting from solar irradiance measurements in weather stations. Accordingly, power factors of PV inverters are regulated by ...

The existing modeling method for PV inverters can be mainly divided into three categories. Firstly, the local

control models of the PV inverter are proposed to respond to local ...

A voltage source inverter (VSI) is the key component of grid-tied AC Microgrid (MG) which requires a fast response, and stable, robust controllers to ensure efficient operation. In this paper, a fuzzy logic controller ...

IET Power Electronics Research Article Active/reactive power control of photovoltaic grid-tied inverters with peak current limitation and zero active power oscillation during unbalanced ...

To ensure the reliable delivery of AC power to consumers from renewable energy sources, the photovoltaic inverter has to ensure that the frequency and magnitude of the generated AC voltage are ...

In general, the power distribution of a parallel inverter is achieved by the use of droop control in a microgrid system, which consists of PV inverters and non-regeneration energy source ...
