How does a photovoltaic cell work?

**Photovoltaic Cell Defined:** A photovoltaic cell, also known as a solar cell, is defined as a device that converts light into electricity using the photovoltaic effect. **Working Principle:** The solar cell working principle involves converting light energy into electrical energy by separating light-induced charge carriers within a semiconductor.

How do you know if a solar panel is octagonal?

If you have solar panels installed nearby, go there and look closely at them. You will notice each panel consists of several small rectangular or octagonal units. These units are nothing but solar cells. A solar panel consists of numerous solar cells. Solar cells are the engine of the photovoltaic system.

How does a solar panel generate electricity?

At the heart of a solar panel's ability to generate electricity is the photovoltaic (PV) effect. Discovered in 1839 by French physicist Edmond Becquerel, the PV effect is the process by which solar cells within the panel convert sunlight into electricity.

What is the working principle of a solar cell?

**Working Principle:** The solar cell working principle involves converting light energy into electrical energy by separating light-induced charge carriers within a semiconductor. **Role of Semiconductors:** Semiconductors like silicon are crucial because their properties can be modified to create free electrons or holes that carry electric current.

What is photovoltaic effect?

This interaction between sunlight and solar cells is termed the photovoltaic effect. The phenomenon was discovered by Edmond Becquerel in 1839. When we close the circuit by connecting the upper and rear end of the solar cell, the excited electrons flow into the circuit. The diagram below depicts the same. Simple working of a solar cell

Can a solar panel power a load?

We can use a solar panel to directly power a load. But, it only works when exposed to light. For example, this solar fan will automatically turn on when exposed to light. The brighter the light, the faster it spins. But, it doesn't work at night. We therefore need a battery to store the energy.
