How is Power Quality investigated at the PCC of a PV plant?

The power quality at the PCC of a PV plant is investigated. The investigation is carried out by analyzing the inverter output voltage and nominal current for different PV plant sizes. Figure 10 (a) shows the voltage PV array and Figure 10 (b) shows the current PV array. Figure 10. (a) Voltage (VPV) and (b) current (IPV) signals of the PV array.

What is a PV model?

A PV model can be simply described as a mathematical representation of the electrical behavior of PV panels for simulating and predicting the performance of PV panels in commercial software environments such as MATLAB/SIMULINK, PSIM, etc. [23,24,25,26].

Do grid-connected solar photovoltaic plants have a good power quality?

The power quality of a grid-connected solar photovoltaic plant is investigated by an analysis of the inverter output voltage and nominal current for different photovoltaic plant sizes. Also, the effect of different conditions of solar irradiance and ambient temperature on the power quality is analyzed.

Does energy-exergy analysis determine the performance of different shading on PV panel?

This research examines the performance calculation of different shading on PV panel under the energy-exergy analysis method. In this study, for static shading, a non-transparent substance and powder were utilized, and for dynamic shading, a chimney's time-varying shading effect was applied to the system.

What is the harmonic distortion of a grid-connected solar PV system?

They proposed a 1.8 MW grid-connected PV system in a radial 16 bus test system. The total harmonic distortion is determined to be 14.27% which is beyond the standard limit. Also, Kumary et al. proposed modeling and power quality analysis of a grid-connected solar PV system.

Does grid-connected photovoltaic generation system affect power quality?

Similarly, Farhoodnea et al. in 2012 suggested power quality impact of grid-connected photovoltaic generation system in distribution network. They proposed a 1.8 MW grid-connected PV system in a radial 16 bus test system. The total harmonic distortion is determined to be 14.27% which is beyond the standard limit.
