

Photovoltaic panel roof angle standard

What is the optimum roof angle of photovoltaic panels in the UK?

The optimum roof angle of photovoltaic panels in the UK is 35-40 degrees. The exact angle depends on the latitude, which is why the best roof angle will be different in other parts of the world. For various reasons we have recently been looking at the performance of solar panels in Africa, Mexico and Spain.

What angle should solar panels be installed on a roof?

Anywhere between 20 and 50 degrees will usually enable your system to produce roughly as much electricity as it could. And in the case of most rooftop solar panel installations, the angle of the solar panels is determined by the angle of the roof - so there isn't much you can do to change it.

What is the best angle for solar panels in the UK?

The best all-year-round angle for PV (photovoltaic) solar panels in the UK is 35-40 degrees. The best angle for each region within the UK will vary slightly within this. For seasonal changes, the best angle for summertime is 20 degrees and 50 degrees in winter. See below for the optimum angle for each UK region.
