

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

How do I install a solar battery system?

The process primarily involves connecting and configuring the solar battery system via your solar inverter, which rarely requires disconnecting your existing power source. Your installer will ensure that the transition is seamless, allowing you to enjoy uninterrupted electricity while your solar battery system is being set up.

Do solar panels need a battery?

Some people also decide to pair their solar panels with a solar battery, which will store excess solar energy to be used on cloudy days or during the night time. If you have a solar battery in your system, the battery also needs to be connected to the inverter at this point. Find out more about how solar batteries are installed on our page.

How do I choose a battery for a DIY solar panel?

Choosing the capacity for your battery is largely up to your budget, so for this basic DIY solar panel installation, we recommend a 12V solar panel 100 Amp hour (Ahr) battery. For any battery-backed DIY solar panel system, choosing a PWM charge controller, rather than a MPPT, will be less efficient, but more cost effective.

What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location and angle for installing panels.
