

Photovoltaic panels on the roof of the house

How do I choose a solar panel for my roof?

Decide on how much of your electricity bills you want to cover with your solar panel usage -- this can be anything from 10-100%. Your decision will affect the system size and costs. Calculate how many solar panels fit your roof. An average solar panel takes about 1.44 m² of roof space. Don't forget to include at least 30 cm from the roof's edge.

Can solar panels be installed on a roof?

“The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

Can solar panels be mounted on a flat roof?

For solar panels on a flat roof, mounting systems are slightly different and can include a triangle 'ballast' box to support the panels. For solar thermal panels (with cells that use the sun's heat to warm water in a house) things are a little different.

Do solar panels generate electricity on a south-facing roof?

Solar panels generate most electricity when they're on a south-facing roof that's sloped at 41° and isn't shaded. It's one of the first things our surveyors look at when checking your home's right for solar. A good surveyor can talk you through how the panels' position on your roof will affect their performance.

How do solar panels fit on a roof?

The framework will run both vertically and horizontally across the roof, and will support the base of the solar panels. The mounting system makes sure the panels stay in place, while also helping to position the panels at an optimal angle on the roof, which will lead to more sunlight exposure.

Which roof is best for solar panels?

roof space, which is the same as about two car parking spaces. A south-facing roof is ideal for generating the most electricity from the sun, but panels facing east or west can also work well. North-facing roofs aren't recommended. If you don't have enough sloping roof space, you could install solar pan
