A stand-alone system with energy storage (a battery) will have more components than a PV-direct system. This fact sheet will present the different solar PV system components and describe their use in the different types of solar PV systems.

convert solar energy into electrical energy are known as solar cells. Solar Cell - A solar cell is a device that converts the energy of sunlight directly into electricity using the photovoltaic effect. Assemblies of cells are used to make solar panels. Solar Panel - A packaged, interconnected assembly of solar cells also known as a solar module.

Figure 6 - Typical monthly solar PV generation (in kWh) for a typical 1 kW PV system in Wakefield Solar panels generate electricity during the day. They generate more electricity when the sun shines directly on the solar panels. Figure 5 shows PV generation in watts for a typical 2.8kW solar PV system on 11 July 2020, when it was sunny
