

of group grounding on the potential rise across a solar farm during a lightning strike is simulated with the PSPICE software tool in [16]. Finally, in [17], PV generation connected to high-voltage ...

Solar photovoltaic (PV) systems are regarded as one of the best renewable energy resources for substituting conventional energy [1, 2]. Different types of grid connected ...

The occurrence of lightning is unstoppable and thus, protection is essential. Photovoltaic systems' vulnerability to lightning strikes--both direct and indirect--means that they must be built with reliable and properly installed ...

The measures proposed in this paper based on the implementation of an active lightning protection system ensure uninterrupted operation of the ground solar power plants, ...

The application of photovoltaic SPD in solar photovoltaic power generation systems can greatly enhance the system's lightning protection capability. Photovoltaic SPD Selection. Choosing ...

The fact, that power generation of these power plants can be unpredictable, must be considered. In addition, growing in numbers also means that the lightning protection of photovoltaic power ...

The lightning damages increases in Photovoltaic (PV) systems because those are usually set up at the place where few tall structure around it. Therefore, it becomes important to establish ...

In addition to the organization of external lightning protection systems of a temple, one should not forget about the provision of internal lightning protection systems: SPD, RCD, APS, etc., since ...

Lightning strikes can affect photovoltaic generators and their exposed installation sites as well as the sensitive electronics of the inverter. Therefore, it is necessary, to estimate ...

In support of safety-protection, in this paper, we have modeled a Lightning Protection System (LPS) and investigate the lightning effect on a large-scale solar power plant with the proposed ...
