PB) such as weed fins, freestyle fins, freeride fins, race fins, thruster fins, twinser fins, wave fins and more. Please check out our fin range below.

What is a power box?

The "Power Box" system was developed and used on F2 and Mistral boards. It has a taper on the sides and on the front and rear. This gives it a very solid fit. Both the Power Box and the Trim Box were intended for use with 28 - 48cm long fins but could handle fins up to 52cm.

What is a fin box?

There are currently 5 major fin box styles that are in common use today. The original fin box is the "US Box" aka "American" or sometimes also called a "Chinook Slot". The fin slides into the slot on a pin and is secured with a small plate with a screw. This type was widely used on many older boards.

What is the difference between a trim box and a power box?

The "Trim Box" was designed by Bic Sport. It has straight sides with plastic spacers to enable proper positioning of the fin inside the track. The "Power Box" system was developed and used on F2 and Mistral boards. It has a taper on the sides and on the front and rear. This gives it a very solid fit.

Powerbox, US box, slot box, tuttle box and more: We provide an overview of the different systems for fin boxes - including their advantages and disadvantages. Very few surfers will choose their board based on the fin box alone.

The system is inspired by the Power Trim system of recent years. A new fin system is of course not feasible on the market until all the major suppliers join in. That's why I started adapting the head of the fin step by step so that the fin can be moved in the power box.

Solid and uncomplicated: The Powerbox is the most widespread variant of the finbox systems, in which the fin is simply inserted into the fin box from below and then fixed from above with a screw. Its biggest advantage is that the conical (wedge-shaped) form of the fin head means that the fin is always pulled firmly into the box without wobbling.

Windsurfing Fins. We stock most of the popular MFC fins in tuttle, power box and US box designs. Fins are the critical link between the board and the water. The right fin can absolutely transform a boards performance. Maui Fin Co are a world leader in fin design.

There are several types of fin boxes: **US Box:** An adjustable and light model; **Slot Box:** An ultra-light model used in multi-fin wave boards; **Power Box:** A standard in free ride boards; **Mini Tuttle Box:** A robust model that has been replaced by the slot box; **Tuttle Box:** A very strong model used in slalom windsurfing;

Solid and uncomplicated: The Powerbox is the most widespread variant of the finbox systems, in which the fin is simply inserted into the fin box from below and then fixed from above with a screw. Its biggest advantage is that the conical ...

Slot Box - Is a light weight surfing-style box with twin recessed screws on the underside of the hull that enter at an angle to secure the fin. It is a popular system on multi-fin boards. Fin attachment is less secure than with bolted systems, meaning that grounding on rocks can cause fins to pop out (or partially dislodged - there is a good chance the fin will not be lost).

MFC FIN FREEWAVE POWER BOX. The new freewave has been updated to last version with a straight

leading edge for the first 10-12cm of the base to help the fin accelerate quickly, get planing early and achieve maximum speed. ... Box System: Powerbox. The price applies to one fin. ATTRIBUTES. Is Overweight Product: False. PERFORMANCE: FREESTYLE WAVE.

The PowerBox Pioneer is the latest development of a 14-channel power supply unit without voltage regulation, designed for HV servos. Since the unit has no voltage regulators, nor the large heat-sink surfaces required for them, it offers ultra-compact dimensions. Even so, the Pioneer still provides redundancy, as is the standard for all power supply units made by PowerBox-Systems.
