Austrian researchers developed a model to quantify the benefits of vehicle integrated photovoltaic (VIPV) on the energy needs of three different sizes of electric vehicle in the city of Graz ...

With the provision of electricity by a photovoltaic system, the whole thing is getting very efficient, for the environment and for your wallet. The concept of the solar-electric house only makes sense with a photovoltaic system on the roof and a high level of self-consumption of the generated solar power.

Photovoltaics is a fast growing market: The Compound Annual Growth Rate (CAGR) of PV installations was about 26% between 2013 to 2023. The intention of the 'Photovoltaics Report' is to provide up-to-date information on the PV ...

Agri-PV makes it possible - because with Agri-PV, agriculture meets photovoltaics. Agri-PV systems are on the rise and enable the dual use of land for agriculture and energy production. While ground-mounted PV systems used to compete with the cultivation of crops or animal husbandry, the Next2Sun concept offers an optimal alternative solution!

Photovoltaic (PV) systems will be used to generate a significant part of this. This goal, i.e. to increase the share of PV electricity, is in conflict with food production, as both compete for the use of agricultural land. Agriphotovoltaic systems (or Agri-PV systems) are designed to tackle these competing needs through a targeted dual-use ...
