

Accurate concentration of electrolytes is essential for ensuring the reliability of battery research and development. Recent studies in electrolytes often overlook or overshoot concentration, ...

Two projects led by the University of Oxford have received a major funding boost from the Faraday Institution, the UK's flagship institute for electrochemical energy storage research. The funding is part of a £19 million ...

Advanced Li-ion batteries have required an incredible amount of research and development to reach the point where they are now: playing a central role in important sustainability efforts, ...

Representatives from five leading European organisations: AVL, BMW Group, Fortescue ZERO, SINTEF and TNO, will form the Battery Parameter eXchange (BPX) Steering Group, which will ...

Bringing advanced battery research into real-world applications remains one of the most difficult challenges, requiring a three-stage, overlapping development process, argues Kieran O'Regan.

The exploration of isopentane as a potential enhancer for battery electrolytes marks a significant milestone in the ongoing quest for improved energy storage solutions. This volatile organic ...

The electric vehicle (EV) battery market is experiencing rapid growth driven by increasing demand for EVs, stringent emission regulations, and government incentives. One of the most ...

The STELLAR project (Safe, sustainable, and high-throughput production of reliable lithium metal anodes for gen 4b/4c/5 batteries) addresses a critical technological challenge in the EU's ...

The Australia-US Researcher Exchange Network aims to strengthen Australia-US research ties, build Australian research capacity in battery technology, and ultimately contribute to the development of a robust ...

US-based Factorial, a startup specializing in solid-state battery development and backed by partners like Stellantis, has unveiled Gammatron, a new artificial intelligence-based platform...

A transformative research partnership led by Swansea University in the UK, in collaboration with tertiary institutions in Kenya and Nigeria, has secured major UK government funding to fast ...

RECOMMENDED ARTICLES In the past decade, traditional leaders like Toyota, Panasonic, and Samsung have been investing heavily in solid-state battery research and development.

Rome battery research and development

Battery capacity aging detection equipment manufacturer identifies with Yishengda - EST group is a national high-tech enterprise that provides full industry supply chain services for the new ...

“Battery lifetime and aging dynamics vary significantly with chemistry, operating conditions, cycling demands, electrode design, and operational history, which makes optimal handling, ...

Berkeley Lab AMCR researchers have developed a machine learning framework that dramatically accelerates battery lifespan predictions--using far fewer experiments--by combining expert ...

The global market for hydrogen storage alloys used in Nickel-Metal Hydride (Ni-MH) batteries is experiencing steady growth, driven by increasing demand for energy storage solutions in ...
