

Scm systems power carver

How good is the SCM 400xs handpiece?

In the quality of construction, we were impressed with the quality of the machining on the SCM 400xs handpiece. We like the exhaust jets located in the tip of the nose on the SCM 400xs. The jet blows away dust, making it easier to follow pattern lines. Built for Precision and Speed. Power and Control Never Felt So Good.

What equipment does a power Carver need?

Featuring the 400xs! Plus More! Important: The Power Carver requires an air compressor and also a regulator with a filter and moisture trap to deliver clean dry air to the engraver. A one horse power or larger air compressor with a 4-6 gallon (22 liter) tank is required to operate the Power Carver.

What makes a carver a low power Carver?

If you have low RPM and high torque, you will have low power carver. Likewise, high RPM and low torque will get you a low power carver. What is best is high torque and high RPM to give you a high powered carver. Carvers range from just a couple of watts of power up to 20 watts.

Are micro motors faster than pneumatic carvers?

Micro-motors are not as fast as pneumatic carvers, but they are faster than the larger & smaller motor flex shaft and rotary tools. Micro-motors have the motor built inside the hand-piece, pneumatic carvers and micro-motors are great for light carving applications, precision and detail work. Strong 202 from Tree Line USA. 400XS from SCM Systems.

Does a power Carver need an air compressor?

Important: The Power Carver requires an air compressor and also a regulator with a filter and moisture trap to deliver clean dry air to the engraver. A one horse power or larger air compressor with a 4-6 gallon (22 liter) tank is required to operate the Power Carver. Power Carver: Rated #1 because it's the ultimate detailing tool.

What air pressure should a carver use?

Ideally, a carver requiring an air pressure of 30-38 PSI is a good range for carving. An interesting side effect when carving is the ability of the bearings to handle lateral loading. This is the ability for the bearings to handle the sideways cutting when carving.
