

GSM stands for Global System for Mobile Communication. It is a digital mobile network commonly utilized by mobile phone users around the world. It is the most popular of the three digital wireless telephony systems (TDMA, ...

The NB-IoT smart meter market is experiencing robust growth, driven by increasing demand for efficient energy management and smart grid infrastructure upgrades. The market, estimated at ...

Communication delay, as a key factor restricting the rapid and accurate transmission of data in the smart grid, will affect the collaborative operation of power electronic devices represented ...

The proliferation of IoT devices necessitates robust and secure communication networks, significantly boosting the adoption of LTE routers. Furthermore, the ongoing expansion of 4G ...

The smart charging network launched by State Grid Corporation of China, which aims to promote data-sharing between various charging companies, has covered as many as 756,000 charging piles by the end of August, with a ...

The company vowed to invest 670 billion yuan in grid network construction during the 14th Five-Year Plan period to ensure power supply stability and boost green power consumption, which will be used in clean ...

The global market for Intelligent Feeder Terminal Units (FTUs) is experiencing robust growth, driven by the increasing demand for smart grids and advanced energy management systems. ...

What role will 5G and 6G play in smart grid resilience? The study evaluates how ultra-reliable and low-latency communications, made possible by 5G and future 6G capabilities, are crucial for ...

To this end, Compute First Networking (CFN) was proposed, whose goal is to achieve optimal and efficient use of network and computing resources. However, how to efficiently obtain ...

Smart grid communication network
