The Low-cost Earth-abundant Na-ion Storage consortium is a major effort to create superior, no-compromise batteries that replace lithium with inexpensive, domestically abundant sodium and ...

Solvent co-intercalation into graphite anodes for sodium-ion batteries is common; however, intercalation into cathodes is much less explored. Here, using operando experiments as well ...

Owing to the natural abundance of sodium and the similar chemical properties between Na and Li, SIBs exhibit significant economic advantages and favorable ion transport kinetics (Fig. 1 a). ...

The Global Anode Material for Sodium-ion Battery Market was valued at USD 782.4 million in 2024 and is projected to reach USD 2.86 billion by 2032, growing at a Compound Annual ...

UDAIPUR, India, July 21, 2025 /PRNewswire/ -- Macsen Labs, a manufacturer of APIs, dyes, and specialty chemicals since 1952, has announced a major breakthrough in Sodium-Ion ...

As a promising alternative, sodium-ion batteries (SIBs) have attracted significant attention due to their similar electrochemical behavior and the abundant availability of sodium-based raw ...

Biomass-derived hard carbon (HC) materials, celebrated for their superior sodium storage capability and economic viability, have emerged as a promising candidate for anode materials ...

General | July 24, 2025 India's Macsen Labs "achieves breakthrough in sodium-ion battery chemistry" The company has successfully carried out an R& D-scale synthesis of its high ...

Sodium-ion batteries (SIBs) have attracted extensive attention in the field of energy storage due to their abundant sodium resources (423 times higher than the abundance of lithium) and low ...

Sodium (Na)-ion batteries have recently emerged as cost-effective and sustainable alternatives to lithium (Li)-ion batteries. Na, the sixth most abundant element on Earth, offers lower material ...

The approach of jointly storing ions and solvents in cathode materials provides a new handle for designing batteries with high efficiency and fast charging capabilities. The results are ...

Macsen Labs, a manufacturer of APIs, dyes, and specialty chemicals since 1952, has announced a major breakthrough in Sodium-Ion battery technology through the successful R& D-scale ...

Polyanionic materials are considered one of the most promising cathode materials for sodium-ion batteries because of the stable structure framework and high working voltage. However, most ...

Macsen Labs, a long-standing manufacturer of specialty chemicals, has announced progress in sodium-ion battery research through the successful R& D-scale synthesis of high-performance Prussian White, a next-generation ...

The Sodium-ion Battery Materials market for Electric Vehicles (EVs) is poised for significant growth, driven by the increasing demand for cost-effective and sustainable energy storage ...

Lithium-ion batteries have come to dominate the secondary energy storage market; however, their broader application is limited by the scarcity of lithium resources and high production costs. As ...

Sodium superionic conductor (NASICON)-structured type  $\text{NaTi}_2(\text{PO}_4)_3$  and  $\text{LiTi}_2(\text{PO}_4)_3$  battery materials are investigated and compared for their Na-ion and Li-ion transport properties. ...

Abstract In this work, rubidium and cesium ions are studied as electrolyte additives for lithium-, sodium- or potassium-ion batteries. Therefore, it has been evaluated the promising alternative ...

Hard carbon (HC) has broad prospects as anode material for sodium-ion batteries (SIBs). However, the low initial coulombic efficiency (ICE) and poor cycle stability limit its further ...
