

What is thermal energy storage (TES) in solar energy field?

Usage of renewable and clean solar energy is expanding at a rapid pace. Applications of thermal energy storage (TES) facility in solar energy field enable dispatchability in generation of electricity and home space heating requirements. It helps mitigate the intermittence issue with an energy source like solar energy.

What is seasonal solar thermal storage system?

Seasonal solar thermal storage system store energy during the hot summer months and use it during colder winter weather. Solar thermal energy is captured by solar collectors and stored in different ways. The three above mentioned parameters used to calculate the TES potential are described with the following equations:

What are the properties of solar thermal energy storage materials?

2. The properties of solar thermal energy storage materials Applications like house space heating require low temperature TES below 50 °C, while applications like electrical power generation require high temperature TES systems above 175 °C .

What are the components of a solar thermal energy storage system?

The performances of solar thermal energy storage systems A TES system consists of three parts: storage medium, heat exchanger and storage tank. Storage medium can be sensible, latent heat or thermochemical storage material . The purpose of the heat exchanger is to supply or extract heat from the storage medium.

Why is thermal energy storage important?

Thermal energy storage (TES) is increasingly important due to the demand-supply challenge caused by the intermittency of renewable energy and waste heat dissipation to the environment. This paper discusses the fundamentals and novel applications of TES materials and identifies appropriate TES materials for particular applications.

Why should a solar thermal storage unit be used?

The solar thermal storage unit can also improve the equipment performance in terms of a smooth supply of energy with fluctuated solar energy collection as solar radiation varies throughout a day.
