

What is solar thermal power generation?

Harnessing solar energy for electric power generation is one of the growing technologies which provide a sustainable solution to the severe environmental issues such as climate change, global warming, and pollution. This chapter deals with the solar thermal power generation based on the line and point focussing solar concentrators.

What is solar thermal energy?

Solar thermal energy (STE) is a form of energy and a technology for harnessing solar energy to generate thermal energy for use in industry, and in the residential and commercial sectors. Solar thermal collectors are classified by the United States Energy Information Administration as low-, medium-, or high-temperature collectors.

How do solar thermal technologies produce electricity?

This high temperature is achieved by concentrating solar radiation on the receiver, and these technologies are known as concentrating solar power (CSP) technologies. Hence, the electricity generation by solar thermal technologies involves the collection and concentration of solar radiation in the form of heat and its conversion into electricity.

What are thermal energy storage concepts for direct steam generation solar plants?

"Thermal energy storage concepts for direct steam generation (DSG) solar plants" summarizes recent research from the use of the existing commercial systems with optimized power blocks, to three-part storage systems that combine the use of sensible and latent heat storage.

When was solar thermal technology invented?

The power generation for commercial applications using solar thermal technologies was started in 1985. In the present scenario, solar thermal technologies are getting more attention among other renewable energy technologies as it has high reliability and dispatchability because of its low-cost storage capability.

What are the industrial applications of solar thermal energy?

In this article, an extensive review of various solar thermal energy technologies and their industrial applications are presented. The following industries are covered: power generation, oil and gas, pulp & paper, textile, food processing & beverage, pharmaceutical, leather, automotive, and metal industries.
