

Solar panels leaking

Do solar panels cause roofs to leak?

Solar panels rarely cause roof leaks. When roof leaks occur after solar panel installation, they usually become evident within the first year.

Can solar panels cause a roof to leak?

The installation of solar panels on your roof can be an exciting time as it means you will be cutting down your energy costs considerably, but doing this will involve drilling holes in your roof, which could beg the question of whether this will cause your roof to leak? There are various reasons your roof could leak after installing solar panels.

How do I know if my solar panels are leaking?

Pooling water on the roof or around the solar panels clearly indicates a roof leak. If you observe standing water after rainfall, it's crucial to investigate further and identify the source of the leak. 4. Decreased Energy Production or System Performance A roof leak can also impact the performance of your solar panel system.

How do I fix a roof leak after installing solar panels?

If you're experiencing roof leaks after installing solar panels, contact a professional roofing contractor who specializes in solar panel installations for a thorough inspection. They can identify the source of the leaks and recommend appropriate solutions.

What causes a post-solar panel leak?

Exposure to weather conditions and UV radiation over time can cause sealants to degrade, leading to gaps that allow water to infiltrate and cause a post-solar panel leak. Regular inspection and maintenance of the sealants can help prevent this issue. Roof age and condition also impact the risk of a post-solar panel leak.

How do I seal a leak under my solar panels?

Applying sealant is a temporary solution that can help to seal small gaps or cracks in the roof under your solar panels. This can be particularly useful when you have identified the source of the leak and it is accessible. Here are the steps to follow when applying sealant:
