How does a solar meter work?

The meter typically displays your solar production in kilowatt-hours (kWh) and the excess power that your system sends back to the utility grid. To calculate your solar system's performance, you can compare your solar panel meter reading to your electricity consumption.

Why do I need a solar panel meter?

Being able to read your solar panel meter is vital for monitoring the performance of your solar electric system. It allows you to track the amount of power generated by your solar panels, the amount of excess power that is sent back to the grid, and your electricity consumption.

What is a solar panel meter?

Solar panel meters, also known as net metering devices, play a vital role in monitoring energy production from solar panels. They help homeowners and businesses keep track of their electricity generation from the sun and make informed decisions to maximise their savings.

How does a utility meter connect to a solar panel?

There is an ALTERNATIVE UTILITY CONNECTION called a "Supply or Line Side" connection. This connection is made BEFORE the main breaker. A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box.

Why do you need a smart meter for solar panels?

Reading a smart meter for solar panels is essential for monitoring energy consumption and production. By understanding the different readings displayed on a smart meter, you can gain valuable insights into your solar power system's performance.

How do I read my solar panel meter?

To read your solar panel meter, follow these steps: Check the LCD display screen to see the current power generation and consumption in kW. Note the total kWh produced by your solar system and consumed from the utility grid. This information may be shown on separate screens or rotate on the display screen.

Wiring diagram of a typical residential solar metering installation. This type of metering is for a buy all sell all metering agreement between the customer and the utility. Many people are unaware that the utility has different rate structures ...

There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. The most common is a "LOAD SIDE" connection, made AFTER the main breaker. The alternative is a "LINE OR ...
