What is a PV panel?

Photovoltaic (PV) Panel PV panels or Photovoltaic panel is a most important component of a solar power plant. It is made up of small solar cells. This is a device that is used to convert solar photon energy into electrical energy. Generally, silicon is used as a semiconductor material in solar cells.

What is a solar power plant?

It is a large-scale PV plant designed to produce bulk electrical power from solar radiation. The solar power plant uses solar energy to produce electrical power. Therefore, it is a conventional power plant. Solar energy can be used directly to produce electrical energy using solar PV panels.

How a solar panel converts sunlight into electricity?

Solar energy is the use of sun energy directly as thermal energy (heat) or through the use of photovoltaic cells in solar and transparent photovoltaic glass to generate electricity. Now, let's look at how a solar panel converts sunlight into electricity. You might like: [Different Types of Power Plants and Their Uses Around The World](#)
