This is a comparison of the new Power-Pole ONE Pump with two Power-Pole Blade's pumps Two Pumps One Dual Anchor Pump; Dry Weight (Without FLUID) 11.3 lbs: 7.13 lbs: Overall ...

If the Pedrollo pump status light is on and flashing and the pump won't start, that indicates insufficient water flow or perhaps a well that's running dry or a leak in well piping. If the status light is on solid and the pump is running but won't start, the usual cause is a stuck check valve that needs cleaning or replacement.

The Power-Pole Blade is the best-selling shallow water anchor on the market, and its renowned performance is now even better. Let's introduce the Power-Pole ONE Pump. The ONE Pump design allows you to power dual Blade anchors off one singular pump, utilizing the latest and most advanced hydraulic anchoring system on the water.

If you have any issues updating your ...

Hello. I have zero interest in Crappie Brakes that have to be raised and lowered manually so there is zero chance I'm buying them. However, I'd love to hear the Pro's & Con's from either but I'm mainly wanting to know about people who have them on their Power Poles to know the wear and tear they put on Pumps & the Long Jevity of them in regards to maintenance.

Got a pair of 10 ft blades, c-monster 1.0 pumps. Was out on the lake yesterday and everything seemed fine for quite a few cycles. Then one pump stopped working. The pump housing had no flashing green light, no light at all. Verified the fuse was fine. I shut off then turned on my master power switch, and it came back on. After

Solid green light on power pole pump

one cycle of lowering and raising, it cut ...

LED is solid Green: Device connected to your network. None. LED is solid Yellow: Device is not able to connect with your network. Check network connection. LED is blinking Yellow (half a second on, then 9 and a half seconds off) Device is running on battery power. Check main power source. LED is blinking Yellow: 1 second on, then 4 seconds off.

Make sure that you stay cautious throughout the process as there are several options that you can choose between.. First, you need to start by checking the fuses in the power pole housing.. Depending upon the installation of the power pole, you need to open up the housing and check the fuses to see if they are blown.If the fuse is blown, then you can quickly ...

How do I program my Power Pole Pro Series 2? First, you will need to locate the program button on top of the pump and hold the button for 3 seconds. Once you hear a beep, you will also see a solid green light come on. The pump is now ready to take the program. Then, you will hit the up or down arrow button on your controller, which will result ...

Solid Red and Green Light on the Furnace. The solid red and green lights indicate an issue with the furnace's ignition control module, which is the circuit board that controls the ignition of the furnace. It is possible that the circuit board has failed or that the heat exchanger has cracked, which can cause the circuit board to fail.

If only one static green light is illuminating, the heat pump is close to reaching its pre-programmed temperature (no more than 2 0 C). That, however, is not stopping the heat pump from cooling or heating your space. But once the two green lights illuminate, it shows the heat pump is not near its preset temperature, perhaps by more than 2 0 C. . But like in the first case, the heat pump ...

anchor. If the Power-Pole anchor does not stay in the retracted state, repeat step 8 until it does. STEP 10. Once on the water, navigate to an area that is deep enough to fully deploy your Power-Pole anchor without it touching the bottom. STEP 11. Using the dash switch set to medium speed, fully deploy and retract the Power-Pole anchor six ...

9", the Power-Pole anchor will need to be mounted higher up on the transom to prevent interference. 2. While holding the Power-Pole anchor in place, turn and tilt the motor as far as possible toward the unit. With the motor turned toward the unit, manually move the anchor through its entire range of motion to verify clearance. 3.
