

Teknoware central battery system

Do Teknoware luminaires need separate data cabling?

The testing of the luminaires is based on individual addresses, and the communication is by means of the power supply cables. Thus, there is no need for any separate data cabling between the luminaires. The luminaires must be addressable, of the Teknoware products with the letter K in the end, or they must have a separate address module.

What is a basic system in a central battery system?

The basic system indicates the state of the Central Battery System and the luminaires connected to it and displays the test log book information. The user may also run luminaire and battery tests. WebCM is available for the Central Battery Systems in the TKT65, TKT66, TKT67 and TKT68 series, which are equipped with addressable monitoring function.

What is the input voltage of a central battery system?

The Central Battery System input voltage is 230 VAC, except for three phase input models (that end in letter F) the input voltage, of which is 400 VAC between the phases. The output voltage is 230 VAC in normal mode and 216 VDC in battery mode.

TKT65B series central battery system offers an effective solution to supply medium to high number of emergency and exit lights. It is suitable for medium sized buildings. ... Teknoware Oy . Our passion is finding the best lighting, interior or emergency lighting solution for trains, buses, buildings, and ships. +358 3 883 020
