What are the EMC standards for solar inverters?

Electromagnetic compatibility (EMC) standards EN 61000-6-3 and EN55014-1, however, also put limits on the noise generated from lines not connected to the grid, such as the line to the solar panels. Meeting these limits can be achieved by using a DC filter on the DC side of the inverter.

Which EMC filter should I use?

For solar power inverters, a DC EMC filter should be employed to address frequency interference on the DC side. For upper frequencies, an AC EMC filter is recommended, but it should be placed on the output AC side. To filter low-frequency problems, a sine wave filter can be included.

What happens if you convert a solar panel to a DC inverter?

Converting a solar panel to a DC inverter can lead to premature aging of the solar panel due to superimposed high-frequency currents and leakage currents. Additionally, it can result in electromagnetic interference (EMI) radiated by the panels that may exceed regulatory limits. Upstream of the inverter on the DC side, these effects are less obvious but still quite serious.

What are EMI filters?

There are various techniques to choose from; EMI filters are one such method, generally used in the input side as well as the output side of inverters to reduce EMI. There are various types of EMI filters, including common mode EMI filters and differential EMI filters, used to minimize the effects of EMI from inverters to the DC side and AC side.

How do solar inverters work?

Modern solar inverters use maximum power point (MPP) trackers, which generate disturbances into both the grid's AC power line and the DC side of the solar module. Installers will usually place filters on the grid's AC power line, but it's often forgotten that there is also noise generated on the DC.

How to reduce EMI in a solar inverter?

Proper grounding: Ensure that the inverter is properly grounded to minimize the risk of EMI. Quality components: Use high-quality components in the inverter circuit to reduce EMI. Shielding: Shield the inverter and cables with metal casing or braided shielding to reduce the emission of EMI.
