

The process of installing solar power generation for self-use at home

Should you start a DIY project with solar panels?

Beginning a DIY project with solar panels like EcoFlow Solar Panels marks a significant step towards securing renewable energy for your home. To install your own solar panel system, you must first understand such a project's legal and practical aspects.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.

What is a DIY solar panel installation?

DIY installations allow you to customise your solar panel system to match your home's energy needs and roof layout (or perhaps even a balcony). Some professional installations may offer limited options, while a DIY approach allows for optimising panel placement, choosing specific components, and tailoring the system for maximum efficiency.

How do solar panels connect to a house?

Solar panels are connected to your house in two ways: an electrical connection and a mechanical connection. Here's how both of these work, and what it means for your house. Your installer will connect the solar panels to the inverter through a series of wires that will travel through your roof.

Why should you install solar panels?

Installing solar panels lets you use free, renewable, low carbon electricity. You can sell surplus electricity to the grid or store it for later use. According to low-carbon certification organisation MCS, there were more than 183,000 solar panel installations across the UK in 2023.

We recommend using a certified solar installation company to ensure a safe and proper installation. When performing a DIY solar installation, be sure to select the optimal angle for your solar panels. For a visual walk
