o 53.1 MWh of energy storage were deployed in Q3 2015, a 10% increase from Q3 2014 and a fourfold increase from Q3 2013 o The behind-the-meter market continued its strong showing of previous quarters, growing over 16 times larger than in the same period last year

Delivered quarterly, the US Energy Storage Monitor from the American Clean Power Association (ACP) and Wood Mackenzie Power & Renewables provides the clean power industry with exclusive insights through comprehensive research on energy storage markets, deployments, policies, regulations and financing in the United States. These in-depth reports provide energy industry ...

The U.S. storage market hit a new high in Q3 2023, installing the most capacity in a quarter to date with 7,322 megawatt hours (MWh) becoming operational in the third quarter of 2023. ... (ACP) and Wood Mackenzie's latest ...

This quarter's release includes an overview of updates in the US energy storage market, with new deployment data from Q3 2020. It includes key trend analysis for policy landscape, system price trends, VC investments, M& A, vendor activities and deployments across residential, non-residential and front-of-the-meter segments.

An energy transition disrupts the status quo. A new energy source emerges, leading to a structural and permanent change in supply, demand, energy mix and prices. The energy transition currently underway is about a transformational switch away from fossil fuels and into renewable and clean sources of energy (solar, wind and water).
