A 400W solar panel could produce 2000W every day. 15 of these gets you to 30kwh a day / 900kwh a month. Note that solar panels may not always reach peak output. In real world situations it can happen that solar panels to reach 200 watts or whatever their rated output is. Even if it did we have to account for energy losses in cable and solar ...

How you connect an inverter to a solar panel will depend on the type of solar system you are running and the devices being powered by the system. If your solar system is powering DC 12-Volt appliances and AC 120-Volt or 220-Volt appliances, you can not connect the inverter directly to the battery and then to the main circuits.

Yes, you can use solar panels without an inverter for some devices. This works for things like laptops, cellphones, and small electronics. The solar panels directly connect to these devices. It's done to avoid using an inverter and is more common in off-grid settings. This way, users can power essential items without adding complexity or cost.
