Why is China accelerating grid construction this year?

China said it will continue accelerating domestic grid network construction this year with a focus on ultrahigh-voltage power transmission networks. It will mark an attempt to further ensure power supply stability and boost green power consumption in the country.

What does China's new power grid plan mean for China?

It will mark an attempt to further ensure power supply stability and boost green power consumption in the country. State Grid Corp of China, the country's largest State-owned utility, plans to invest 501.2 billion yuan (\$79 billion) in domestic grid network construction this year, up nearly 9 percent year-on-year and an all-time high.

How will China expand the grid to support cleaner electricity?

It has ambitious plans to further expand the grid to support larger amounts of cleaner electricity. A shining example is the first green ultrahigh-voltage power transmission line that will transmit solar power generated in Qinghai province to users in Henan province. The line was opened by State Grid in 2019.

Why is China's power grid creaking?

China's creaking grid represents a major constraint to progress on its green energy transition. During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase.

How does China's grid system work?

China's grid system predominantly distributes power between provinces through fixed medium-to-long term contracts, which do not accommodate changes in regional demand and supply conditions. More than 90% of market-based power trading in China is conducted through these mid-to-long term contracts, according to S&P Global Commodity Insights.

Will China build a global power grid?

The technology acts as a key component in China's proposal to build a global power grid, known as the Global Energy Interconnection. The idea - announced by China's president Xi Jinping at a United Nations summit in 2015 - is to link up national grids over the next three decades.

China is introducing more flexible power transmission arrangements into its national grid system, helping to avoid a repeat of the outages that plagued parts of the country ...

Diagram of an electrical grid (generation system in red, transmission system in blue, distribution system in green) An electrical grid (or electricity network) is an interconnected network for electricity delivery from producers to consumers. ...
