After learning how damaged solar panels can result in power loss, let's explore another common issue: hotspots in solar panels. This problem arises due to electrical issues, often triggered by improper installation or broken wiring, which can lead to power loss or even fires.

Is solar energy inefficient and unreliable?

For a country that already uses too much water for farmers, it is nearly impossible to use that much amount of water to produce solar energy. Considering the above-mentioned disadvantages of solar energy, it is safe to say solar energy is inefficient and unreliable.

What happens if your solar panel wiring is faulty?

Faulty Electrical Wiring If your electrical wiring on the roof is faulty or old, it can disrupt the efficiency of your solar panels by affecting electricity production. This happens because, over time, the wiring can develop problems like loose connections, corrosion, and oxidation. Even pests like rats can damage the wiring by chewing on it.

Are solar panels toxic?

The manufacturing of solar panels uses hazardous and toxic elements like hydrochloric acid, gallium arsenide, sulfuric acid, copper-indium-gallium-diselenide, etc. In 2016, The International Renewable Energy Agency (IRENA) came up with a study that reveals that there were 250,000 metric tonnes of solar panel waste at the end of that year.
