

What to do if you regret installing photovoltaic panels

Why do homeowners regret installing solar panels?

Low-quality or poor-standard panels may cause more problems than they solve. Solar panel manufacturers often promise high output levels for their products. However, if these promises aren't met due to inferior materials or manufacturing processes, it's easy to see why homeowners regret installing solar.

Should you install solar panels again if you move home?

Imagining your house filled with mess from a lengthy installation could be enough to put you off considering solar panels. But few owners complained to us about the installation being disruptive, and 80% said that they'd install solar panels again if they moved home.

What should I do if my solar meter is faulty?

Contact your solar panel installer or a solar panel maintenance professional. If your generation meter is replaced, make sure you get a letter from the installer stating what they have done and that they changed the meter because it was faulty. The paperwork should also state the model and serial numbers of the old and new meters.

What are some common problems after buying solar panels?

Common Regrets After Purchasing Solar Panels, is something many homeowners share after making hasty decisions or failing to consider all factors involved with going solar. From choosing poor-quality panels, underestimating maintenance costs, ignoring local utility rules to not understanding tax breaks fully can all lead down this path.

Do you regret buying a solar system?

The majority of solar regrets fall into two categories: Leases and PPAs are often advertised as " free solar " in order to lure people into signing a long-term contract that's far less favorable than purchasing a solar system. These agreements often become troublesome when the homeowner tries to sell the house.

How do I choose a solar panel?

Find out more about types of solar panels and other buying advice for solar panels. To help decide which type of solar cells to go for, look at cost per watt ($\$/W$) of power output. You can do this by dividing the total cost of the solar system you are being quoted for by the total power output of the system.
