

Who says solar power is the only source of electricity

Is solar energy the ultimate energy source?

The answer is yes. Energy is the most important resource for humanity and solar energy is the ultimate energy source. The sun as a solar energy source has a number of : it is abundant, it is essentially inexhaustible, and it doesn't but provides equal access to all users.

Will solar cells be the biggest source of electricity?

Solar cells will in all likelihood be the single biggest source of electrical power on the planet by the mid 2030s. By the 2040s they may be the largest source not just of electricity but of all energy. On current trends, the all-in cost of the electricity they produce promises to be less than half as expensive as the cheapest available today.

Can solar energy be used as a source of electricity?

"The rapid cost decrease of photovoltaic modules and systems in the last few years has opened new perspectives for using solar energy as a major source of electricity in the coming years and decades," said IEA Executive Director Maria van der Hoeven. "However, both technologies are very capital intensive: almost all expenditures are made upfront.

Why is solar power cheaper than other energy sources?

Making cells also takes energy, but solar power is fast making that abundant, too. As for demand, it is both huge and elastic--if you make electricity cheaper, people will find uses for it. The result is that, in contrast to earlier energy sources, solar power has routinely become cheaper and will continue to do so. Other constraints do exist.

Is solar energy a viable option?

The solar and wind duo has been considered a viable option at least for future. The challenge is that solar energy only becomes useful once it's converted into usable energy forms like heat, electricity, and fuels. Below are two state-of-the-art new technologies that convert solar energy into electricity or fuels.

What is solar energy?

Solar energy is any type of energy generated by the sun. Solar energy is created by nuclear fusion that takes place in the sun. Fusion occurs when protons of hydrogen atoms violently collide in the sun's core and fuse to create a helium atom. This process, known as a PP (proton-proton) chain reaction, emits an enormous amount of energy.
