By discharging energy when it's most valuable, battery storage creates tremendous value and flexibility for customers. For example, stored energy from solar PV can be released during peak periods to reduce demand charges for end users, mitigate coincident peaks for utilities, or earn wholesale market revenues for independent power producers.

This utilization increases profits for both wholesale energy and frequency reserve, as it allows the ESS to allocate more energy products that act as reserves for FCR services. Every year, this increased allocation leads to a higher total annual FCR reserve by 10.2% and, consequently, greater activation of energy for FCR services.
