This works out to a maximum wattage of 1,800 watts, across the entire circuit. So a 1,000-watt inverter supplies a little over half the wattage of a residential circuit. Keep in mind, though, that most circuits power a handful of lights and outlets. These inverters, on the other hand, only have two plugs each.

When the A/C compressor kicks in, it's more than a 1,000-watt generator can handle. This is true even if you find a 500 to a 700-watt air conditioner. So don't be fooled by comparing watts. A 1,000-watt generator would happily run the fan in your window air conditioner all day long, but as soon as the compressor kicks in, it will shut down.
