What is a wind farm?

A wind farm, also known as a wind park, is an area of several square kilometers that houses an array of wind turbines to harness the winds from land or sea and generate electricity, which is fed into the grid for consumption.

Can I Rent my Land for a wind farm?

If you are a landowner or farmer with a suitably sized and located space for large scale wind turbine installations (5MW plus, around 2-20 turbines), you may be able to rent your land to specialist wind developers.

How much land does a wind farm need?

In simple terms, the amount of land required for a wind farm largely depends on the size and scale of your project. The average commercial wind turbine requires approximately 1.5 acres of land for the turbine itself. While it's being constructed and installed, the land required for a wind turbine can be anything from 25-40 acres.

Could more wind farms be built on land in the UK?

It could now be easier to build more wind farms on land in the UK. The government has relaxed restrictions on planning wind farms - which means there could be fewer steps when deciding to build one. A wind farm is a collection of wind turbines, usually in a windy space, which create energy when wind hits the turbines' blades.

How does a wind turbine benefit landowners?

For each turbine a landowner allows to be installed and operated on their land, additional income can be generated. A single Wind Turbine up to a full-scale Wind Farm can provide landowners with a regular income, for no additional labour or expense, usually for a period of 25 years.

How to build a wind farm?

If you're an energy company planning to build one, you need to go through the government, as well as doing a public consultation in the area - which is basically making sure locals are happy with a wind farm being put up. Currently, wind farms can only be set up on specific areas of land that had already been chosen for it.

New analysis by the Energy and Climate Intelligence Unit has found that the area of land that could be affected by onshore wind farms in future is just 0.02% of the UK's total land. The UK currently has 15 gigawatts of ...
