

As a clean form of energy utilization, wind power is important for alleviating climate change. Although no direct carbon emissions occur in wind power generation, there exist upstream carbon emissions from manufacturing ...

The complementary operation of hydropower, photovoltaic, and wind power can promote the integration of renewable energy resources into the grid. However, the competition of power ...

While the cumulative power generation of hydropower, nuclear power, wind power and solar power rose by 10.2 percent year-on-year, total investment in clean energy such as hydropower, nuclear power and wind ...

Green hydrogen generation driven by solar-wind hybrid power is a key strategy for obtaining the low-carbon energy, while by considering the fluctuation natures of solar-wind ...

The development of clean energy is an important guarantee for humans to achieve sustainable development. Offshore wind energy has the advantages of safety, no pollution, renewability, large reserve, wide ...

Moreover, the gas turbines for power generation will grow at an annual rate of 3.95% from 2017 to 2026 [3]. However, the performance degradations and gas path faults of gas turbine engines ...

BSO algorithm is used to improve BP network, which improves the prediction accuracy of BP network, and compare the load forecast results with the output of wind power and gas power generation. The wind-gas ...

Xintian green wind power generation
